

# Coruline

Coruline™ is an innovative adaptation of a timeless cladding profile that maintains great appeal to the specifier and client for even the most modern of building applications. The inherent strength and character developed by such a profile provides many potential uses not previously realised. Coruline's strength and flexibility in a great variety of aesthetic and practical ways leads us all to appreciate the ingenuity of its profile even further. Its appearance is accentuated by utilising our proprietary rolling methods that creates panels of long lengths. The aesthetic appeal of concealed fixings and other benefits of the Coruline System enable it to be used in applications for ceilings, walls, eaves and soffits. When installed in accordance with the manufacturer's recommendations, Coruline™ can be used in areas requiring additional resistance to high wear and tear and climatic conditions whilst still providing an appealing and desirable finish.
