ALUMASHADE

The Alumashade system offers Architects and Designers the advantage of three versatile modules; 65mm, 75mm and 100mm.

PRIVACY SCREENS

Protecting your sanctuary

With the trend of higher density living showing no signs of abating and council rules enforced to maintain privacy. How do you stylishly and effectively protect your sanctuary? The answer is ACS Sanctuary Screen. Utilising three versatile blade modules of 65mm, 75mm and 100mm widths provides for stronger design expression. In developments the use of our Sanctuary screens may assist in increasing the size of your development as screening issues are elegantly solved.

Sanctuary blades are available as both perforated and non-perforated. Perforated blades provide a view to the outside and at the same time eliminate 90% of direct sun light entering your protected areas.

The unique curved blade design of Alumashade provides strength and a spanning capacity superior to any comparable Louvre section. The innovative carrier design prevents dislodgment of the blades under strong wind conditions and can be supplied compliant to cyclonic areas, frontal pressure locks the blades more tightly into Carrier sections.

Manufactured from 0.6mm BMT Aluminium, the system is available in various finishes and colours.

- Colorbond
- Baked Enamel
- Powder Coat
