- 1 Higher tensile steel base material stretch formed
- 2 Zinc / aluminium alloy coating
- 3 Conversion coating
- 4 Corrosion inhibitive primer
- 5 Colorbond, Baked Enamel or Clear Lacquer Zincalume finish

ACS ICE range delivers premium acoustics with the enduring properties of metal providing much improved resistance to damage from impact, wear, handling, moisture, mould, scratching and time. ICE tiles are easy to maintain in as new condition and easily cleaned to avoid replacement. This ensures metal tiles can cost less compared to other acoustic tiles given the life cycle over 25 years. ICE tiles are fully recyclable and innovative edge detail makes them perfect to use in refurbishment projects where they can be installed onto existing 2 way exposed grids that are still in appropriate condition.
