

PLAFOND

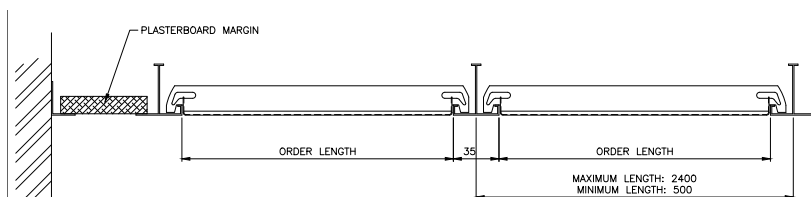

One way Exposed Accessible Open Area & Corridor ceiling systems.

Our Innovative & Contemporary Plafond ceiling system allows for real design freedom and expression through its 180, 300 & 400mm wide One way exposed hook-on metal acoustic panel with adjustable lengths up to 2400mm. As the designer you get to create the ceiling modules that work best for your building and the services integration within the ceiling plane. There are no Cross Tees required between the One way exposed Main Tee as our Plafond panels sit neatly side by side creating a continuous and attractively stylish ceiling system. In Corridor applications, a single span Plafond panel up to 2400mm can be used to create a fully accessible services pathway that neatly conceals and integrates services whilst providing premium acoustic absorption and comfort.

Plafond provides for more ambient and functional spaces through a non-woven bonded acoustic backing which delivers premium acoustic performance and each Plafond panel provides accessibility to the plenum. Plafond panels are available in any length between 500 and 2400mm. Will your Plafond panels be in a classic sequence or vibrant contrast?

With Plafond, you decide.

FLEXIBLE METAL ACOUSTIC BESPOKE CEILING SYSTEMS

WIDTHS: 400 300 180
